### Education

## The Ohio State University

Columbus, OH

Ph.D. in Computer Science

09/2010 - 05/2017

- Dissertation: "Designing Future Low-Power and Secure Processors with Non-Volatile Memory"
- Committee: Radu Teodorescu (Advisor), Feng Qin, Christopher Stewart, Yinqian Zhang

### Beijing University of Posts and Telecommunications

Beijing, China

B.E. in Computer Science [Top 5%]

09/2006 - 07/2010

# **Industry Experience**

## Uber Technologies, Inc.

San Francisco, CA

Software Engineer

06/2018 - Present

- Build deep learning platforms to train and serve models for self-driving cars. [Skills: C++, Puthon, Go, Spark, TensorFlow, PyTorch]
- Build distributed realtime rider pricing serving systems to provide accurate prices to riders in a quick and reliable way. [Skills: Python, Java, HDFS, Spark, Cassandra, Kafka, Elasticsearch]

# Qualcomm Technologies, Inc.

Austin, TX

Senior Engineer

04/2017 - 06/2018

- Build software simulator to model architectural features and performance of Hexagon DSP Processor. [Skills: C/C++, Shell, System Modeling/Analysis]

# Samsung Austin R&D Center

Austin, TX

Software Engineering Intern

05/2015 - 08/2015

- Build CPU power measurement software framework and conduct leakage power characterization and validation on Galaxy-S7 CPU. The developed framework has been used for future power measurements in Samsung. [Skills: C++, Assembly, Android]

# Hewlett-Packard Laboratories

Palo Alto, CA

Research Intern

05/2014 - 08/2014

- Exploit architecture/OS support to design temperature variation aware Memristor memory scheduling policies to improve performance and energy efficiency. Proposed solution achieved 10% performance improvement and 27% energy reduction. [Skills: C++, QEMU, qem5, System Modeling/Analysis]

### **Hewlett-Packard Enterprise**

Boise, ID

Software Engineering Intern

05/2013 - 08/2013

- Build performance profiling software framework for HP-3PAR storage disk array. The developed framework has been used for identifying future embedded software performance bottlenecks in HP. [Skills: C++, Python, Shell, Performance Profiling]

## Tsinghua University Microprocessor and SoC Technology R&D Center

Beijing, China

Research Intern

06/2009 - 06/2010

- Optimize MESI protocol to be aware of data usage in all cache hierarchies to better design cacheline replacement policy in the shared last level cache. Proposed solution achieved 14% performance improvement. [Skills: C++, System Modeling/Analysis]
- Build ELF and PE loaders for a software-based CPU simulator. [Skills: C++]

# Research Experience

Computer Architecture Research Lab @ Ohio State

Columbus, OH 09/2011 - 04/2017

- When Non-Volatile Caches Meet Cold Boot Attacks (04/2016 02/2017): Conduct proof-of-concept cold boot attacks on systems with non-volatile caches running AES disk encryption algorithm and design corresponding countermeasures. Proposed attacks have been successfully performed on real systems and the developed countermeasure solution is 100% effective in defending those attacks with small performance overhead. [Skills: C/C++, gem5, AES, Kernel Programming]
- Rethinking Near-Threshold Multiprocessor Design with Non-Volatile Memory (06/2013 09/2014):
  Implement a new NT-CMP architecture that uses STT-RAM to build all on-chip caches to save power; exploit greedy algorithm on the proposed architecture for better hardware resource management to further improve energy efficiency. Proposed design achieved 11% performance improvement and 32% energy reduction. [Skills: C++, Shell, Assembly, System Modeling/Analysis]
- Using Non-Volatile Memory to Enable Fast Sleep/Wakeup of Idle Cores (03/2012 03/2013): Implement a low-power microprocessor framework that leverages STT-RAM to build a fast and low overhead checkpointing mechanism which enables fast shutdown and wake-up of cores without loss of their execution states to save power in various core idle scenarios. Proposed design achieved 34% energy reduction with less than 3% performance/area overhead. [Skills: C++, Shell, Assembly, System Modeling/Analysis]
- Characterizing and Eliminating Synchronization Induced Voltage Emergencies in Many-Core
   Processors (09/2011 11/2011): Build a kernel module based software tool using Intel's Running
   Average Power Limit (RAPL) interface to obtain CPU power trace when running barrier synchronized
   multithreaded benchmarks on Intel Sandy Bridge i7 processor. [Skills: C/C++, Kernel Programming,
   Multithreading]
- Reactive Core Acceleration for Power-Constrained Chip Multiprocessors (11/2010 08/2011):
  Compile PARSEC benchmarks for SESC simulator by rewriting benchmark pthread code using Linux Threads Library; design core acceleration algorithms to accelerate program execution and mitigate effects of process variation and application imbalance. Proposed design achieved 19% performance improvement and 23% energy-delay reduction. [Skills: C++, Compiler, Multithreading]

#### Skills

Languages: C/C++, Python, Java, Go, Shell, Assembly

Systems: Linux (Kernel Programming), Android, MapReduce, HDFS, Spark, Cassandra, Kafka, Elasticsearch, TensorFlow, PyTorch

Tools: GNU Toolchain, JetBrains Toolbox, QEMU, Docker, Git, SVN, LATEX, gem5
